

Experienced Middle East- 15MW

A 15MW contract in Middle East with fast track power station was signed with a government owned Energy Company. Multiple diesel gensets coupled with step up transformers to supply electricity at 11kV into the customer's substations. The gensets design and containerized package approach will provide a reliable source of power.

SUPERWATT took only 30 days for the installation of the generating equipment along with the entire fuel system, step-up transformers and HV switchgear and interconnects. a complex control and monitoring system to communicate directly with the local electricity dispatch centre.
